Elections Manager - module for the Web Labs eDemocracy Suite

There is an increasing awareness that there is a need to get more of the citizens interested in politics and voting. The Elections Manager website module is designed to assist Local Authorities to promote the citizen awareness of elections and to then rapidly deploy the results in a professional & accessible format, but at a reasonable cost.

System Overview

Elections are important at a local and national level. Although they are not a continuous process, Web Labs can prove your investment with the stand alone Election Manager module, or supply it as part of the eDemocracy suite. You can find out more about the full suite here: www.web-labs.co.uk/e-democracy/

To create an awareness of elections the system will provide key information to web pages branded to meet the requirements of the client web site including:

- Candidate list with political parties and boundaries / wards
- Candidate registration
- Why Vote?
- How to Vote?
- Postal vote information
- Location of polling stations
- Voting timetables
- History of voting in the area with visual chart analysis and a variety of statistical view options
- Options to view political balance of parties in previous local and national elections
- How to register to vote

Voting live

When the vote counting is in progress the Elections Manager allows for the ballot count to be entered in real time by election officers. The system will then immediately calculate the results including the percentage of the vote, the swing percentage and even spoiled votes. To suit your preferred results analysis, information can be rendered in a variety of table based or visual based statistical views.

Web Labs are confident that your future elections will be the most transparent yet with the Elections Manager!

Sharing the democratic process

Where the drama of the election count is important, but access restricted for security reasons, you can share the count of the vote event with citizens and local press officers with other neat features of the software including:

- Projection friendly scoreboard - for large format projectors in
- Optional video feed support for clients that wish to use their streaming video cameras
- Live updates via Twitter feed API
- Count status alerts

System Benefits

- Entirely browser based and requires no local software install
- Publishes information to the public and encourages them to vote
- Provides a level playing field to all candidates
- Centralises the source of all essential information about voting for citizens and proposed candidates
- The results of any election can be efficiently published
- Modest cost & effective
